### **Faculty**

### **Carolyn Burns, M.D.**

Independent Physician Advisor  
Mediware Consulting and Analytics,  
Indianapolis, IN

### **Did you know Transfusion Safety has improved dramatically, but serious adverse events still occur?**

Transfusion-related acute lung Injury (**TRALI**) and transfusion-associated circulatory overload (**TACO**) are the #1 and #2 causes of transfusion-associated mortality reported to the FDA. Other possible reactions include febrile, allergic, acute hemolytic & transfusion associated sepsis.

### **Join us for a CME presentation on Blood Management. Participants should be able to:**

- List the current major adverse events of blood transfusions
- Recognize signs and symptoms of adverse events associated with blood transfusions
- Describe the importance of communication between clinical staff and the Transfusion Service
- Know when to stop the blood transfusion

Now part of the Hackensack Meridian Health family
